

A Tour of WS-Mail

WS-Mail is a comprehensive email service that reaches beyond simple email communications. WS-Mail offers you complete messaging services including a hosted email box, web client, groupware functions and mobile client synchronization. The WS-Mail client has standard e-mail functionalities along with many extra features ideal for your business which requires something more than just basic Webmail. WS-Mail also works with your existing email clients (such as Outlook), and you can even synchronize emails, calendars and contacts with Windows Mobile, iPhone and Blackberry devices.

The following section will give you an overview of the features offered by WS-Mail:

- ***Customizable Interface:***

WS Mail allows you to customize your Emails to suit your taste by providing the following customizable interfaces:

- Advanced Internet Explorer/Firefox
- Simple (Ajax browser)
- Basic (any browser)

- ***Complete Mail Server Support***

WorldSmart's Email service includes support for SMTP, POP3 & IMAP protocols. We also support mobile synchronization protocols such as iPhone and Windows Mobile ActiveSync, and also allow for "push" updates of emails, calendar events and contacts.

We offer you:

- Advanced contacts management feature
- Folder Management feature to organize your emails
- Advanced Calendar options that allow you to share your appointments and tasks with other users

- ***Full Featured Web Client***

The WorldSmart Email service includes the complete Web interface - With the ability for users to send/receive emails, change account passwords, specify auto-reply messages, and email forwarding rules via the Web interface.

- ***Mobile Client:***

Access your emails anywhere with a wireless connection and mobile or PDA devices. WS-Mail includes complete Mobile Client, thereby allowing you to access WS-Mail on any mobile devices such as mobile phones, PocketPCs and network-aware PDAs. WAP v2 and XHTML support allows different of mobile-phones to use the wireless interface, including PDA's built on PocketPC/Palm. You can now read, compose emails, or access your address book on the move.

- ***Anti Spam***

WS-Mail offers a comprehensive email filter including Bayesian (learning) filters, DNSBL support, URL checking in messages against blacklists, auto-whitelist for trusted senders from recipients email history, and extensive reporting utilities.

- ***Anti-Virus***

WS-Mail anti-virus scans all your incoming and outgoing messages for viruses to provide maximum protection from malicious infections. Emails containing viruses (as attachments, even if compressed) are automatically deleted from the system. Additionally, each message received via the SMTP server can be filtered by the anti-virus plug-in and mail delivered to your mailbox if the email is clean.

You can configure the Anti-Virus features from the WorldSmart dashboard and define settings. All viruses are logged in the database, allowing you to monitor the system status.

- ***Secure Encrypted Email Support***

Our enhanced email encryption feature allows you to send and receive emails under a secure, threat-free environment. We use the OpenPGP format to encrypt messages, using 512 - 4096 bit encryption. You can also sign outgoing messages thereby allowing the recipient to verify the authenticity of the emails.

- ***Video Mail***

WS-Mail supports video mails too, thereby allowing you to add a personal touch to your emails, which you just can't get with text-based communications. All you need is a flash plug-in for your browser, a web cam and you're ready for video mail.
